

# GeoAfrika Technologies

Providing geospatial and technological solutions across a broad range of sectors, including the built environment.

V1.0

---

## Enabling better decision-making in the built environment through smart information systems.

GeoAfrika Technologies is a leading Geographic Information System (GIS) company with a focus on both geospatial solutions and app development. Having completed several hundred GIS projects over the past two decades, the team has invaluable experience across sectors including property development, transportation, water, health, economic development, and development planning and housing.

As a division, GeoAfrika Technologies custom-develops information systems for clients using a combination of technologies, such as GIS, GPS, remote sensing and app development environments. This range of cloud-based systems tracks and records the workflow of clients and projects throughout multiple development stages. With this accurate, centralised data at hand, professionals across the legal, financial, survey, valuation, environmental and construction spheres are able to do their jobs with greater certainty. As a long-term benefit, by linking spatial information to big data, the division is able to help businesses make better decisions, with greater efficiency, leading to enhanced income generation.

### Our services include:

- Software and system development
- GIS consulting and enterprise GIS implementation
- Mass data capture (field and office), conversion and analysis
- Project and programme management
- GIS training
- GIS web development and system hosting
- Land audit, valuation and asset registers
- Mobile app development

# Creating simplicity within complexity

Providing guidance,  
information and expertise  
across the whole project  
life cycle.
